M moss & co

Property Code: OEYD7 Property Location: WIMBLEDON SW19

Property Type: Bedrooms:	Flat/Apartment
Summary:	Fantastic first floor 1 bedroom period property in a great location. Light and bright throughout with a double bedroom, bathroom with shower, gas central heating, Large lounge with bay window.
Description:	Fantastic first floor 1 bedroom period property in a great location. Light and bright throughout with a double bedroom, bathroom with shower, gas central heating, Large lounge with bay window. Lots of period features and available immediately. Early viewing highly recommended.
Date Available:	Available Now
Rent (PCM):	£1,600

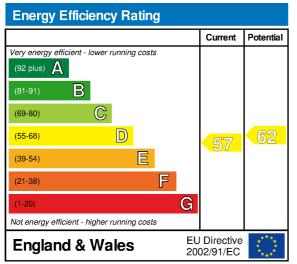

55a High St Wimbledon SW19 5BA tel: 020 8946 7661 info@mosslondonle

Energy Performance Certificate

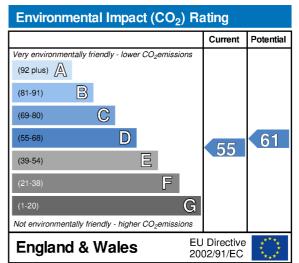

9b Craven Gardens LONDON SW19 8LU Dwelling type: Date of assessment: Date of certificate: Reference number: Type of assessment: Total floor area: Top-floor flat 09 December 2011 09 December 2011 9698-2831-6820-9409-6971 RdSAP, existing dwelling 44 m²

This home's performance is rated in terms of the energy use per square metre of floor area, energy efficiency based on fuel costs and environmental impact based on carbon dioxide (CO₂) emissions.

The energy efficiency rating is a measure of the overall efficiency of a home. The higher the rating the more energy efficient the home is and the lower the fuel bills are likely to be.

The environmental impact rating is a measure of a home's impact on the environment in terms of carbon dioxide (CO_2) emissions. The higher the rating the less impact it has on the environment.

Estimated energy use, carbon dioxide (CO₂) emissions and fuel costs of this home

	Current	Potential
Energy use	352 kWh/m²per year	302 kWh/m²per year
Carbon dioxide emissions	3.0 tonnes per year	2.6 tonnes per year
Lighting	£30 per year	£30 per year
Heating	£543 per year	£478 per year
Hot water	£73 per year	£65 per year

You could save up to £74 per year

The figures in the table above have been provided to enable prospective buyers and tenants to compare the fuel costs and carbon emissions of one home with another. To enable this comparison the figures have been calculated using standardised running conditions (heating periods, room temperatures, etc.) that are the same for all homes, consequently they are unlikely to match an occupier's actual fuel bills and carbon emissions in practice. The figures do not include the impacts of the fuels used for cooking or running appliances, such as TV, fridge etc.; nor do they reflect the costs associated with service, maintenance or safety inspections. Always check the certificate date because fuel prices can change over time and energy saving recommendations will evolve.

Remember to look for the Energy Saving Trust Recommended logo when buying energy-efficient products. It's a quick and easy way to identify the most energy-efficient products on the market.

This EPC and recommendations report may be given to the Energy Saving Trust to provide you with information on improving your dwelling's energy performance.

9b Craven Gardens, LONDON, SW19 8LU 09 December 2011 RRN: 9698-2831-6820-9409-6971 Energy Performance Certificate

About this document

The Energy Performance Certificate for this dwelling was produced following an energy assessment undertaken by a qualified assessor, accredited by Elmhurst Energy Systems Ltd, to a scheme authorised by the Government. This certificate was produced using the RdSAP 2009 assessment methodology and has been produced under the Energy Performance of Buildings (Certificates and Inspections) (England and Wales) Regulations 2007 as amended. A copy of the certificate has been lodged on a national register.

Assessor's accreditation number: Assessor's name: Company name/trading name: Address: Phone number: Fax number: E-mail address: Related party disclosure: EES/002302 Mr. Eamon Finn Eamon Finn 5A Errol Gardens New Malden Surrey KT3 6QF 0208 336 2799 eamon.finn@sky.com No related party

If you have a complaint or wish to confirm that the certificate is genuine

Details of the assessor and the relevant accreditation scheme are on the preceding page. You can get contact details of the accreditation scheme from their website at www.elmhurstenergy.co.uk together with details of their procedures for confirming authenticity of a certificate and for making a complaint.

About the building's performance ratings

The ratings on the certificate provide a measure of the buildings overall energy efficiency and its environmental impact, calculated in accordance with a national methodology that takes into account factors such as insulation, heating and hot water systems, ventilation and fuels used. The average Energy Efficiency Rating for a dwelling in England and Wales is band E (rating 50).

Not all buildings are used in the same way, so energy ratings use standard occupancy assumptions which may be different from the specific way you use your home. Different methods of calculation are used for homes and for other buildings. Details can be found at www.communities.gov.uk/epbd.

Buildings that are more energy efficient use less energy, save money and help protect the environment. A building with a rating of 100 would cost almost nothing to heat and light and would cause almost no carbon emissions. The potential ratings on the certificate describe how close this building could get to 100 if all the cost effective recommended improvements were implemented.

About the impact of buildings on the environment

One of the biggest contributors to global warming is carbon dioxide. The way we use energy in buildings causes emissions of carbon. The energy we use for heating, lighting and power in homes produces over a quarter of the UK's carbon dioxide emissions and other buildings produce a further one-sixth.

The average household causes about 6 tonnes of carbon dioxide every year. Adopting the recommendations in this report can reduce emissions and protect the environment. You could reduce emissions even more by switching to renewable energy sources. In addition there are many simple everyday measures that will save money, improve comfort and reduce the impact on the environment. Some examples are given at the end of this report.

Click www.epcadviser.direct.gov.uk our online tool which uses information from this EPC to show you how to save money on your fuel bills.

Further information about Energy Performance Certificates can be found under Frequently Asked Questions at www.epcregister.com

Recommendations

9b Craven Gardens, LONDON, SW19 8LU 09 December 2011 RRN: 9698-2831-6820-9409-6971

Recommendations

The measures below are cost effective. The performance ratings after improvement listed below are cumulative, that is they assume the improvements have been installed in the order that they appear in the table. The indicative costs are representative for most properties but may not apply in a particular case.

	Indicative Cost	Typical savings per year	Ratings after improvement	
Lower cost measures			Energy Efficiency	Environmental Impact
1 Increase loft insulation to 270 mm	£100 - £300	£23	D 58	D 57
Sub-Total		£23		
Higher cost measures				
2 Replace boiler with new condensing boiler	£1,500 - £3,500	£51	D 62	D 61
Total		£74		
Potential energy efficiency rating D 62				
Potential environmental impact (CO ₂) rating D 61				D 61

Further measures to achieve even higher standards

The further measures listed below should be considered in addition to those already specified if aiming for the highest possible standards for this home. However you should check the conditions in any covenants, planning conditions, warranties or sale contracts. The indicative costs are representative for most properties but may not apply in a particular case.

3 Replace single glazed windows with low-E double glazing	£2,500 - £6,500	£44	D 64	D 65
4 50 mm internal or external wall insulation	£5,500 - £14,500	£141	C 74	C 77
Enhanced energy efficiency rating			C 74	
Enhanced environmental impact (CO ₂) rating				C 77

Improvements to the energy efficiency and environmental impact ratings will usually be in step with each other. However, they can sometimes diverge because reduced energy costs are not always accompanied by a reduction in carbon dioxide (CO_2) emissions. 9b Craven Gardens, LONDON, SW19 8LU 09 December 2011 RRN: 9698-2831-6820-9409-6971

Summary of this home's energy performance related features

The table below gives an assessment of the key individual elements that have an impact on this home's energy and environmental performance. Each element is assessed by the national calculation methodology; 1 star means least efficient and 5 stars means most efficient. The assessment does not take into consideration the physical condition of any element. 'Assumed' means that the insulation could not be inspected and an assumption has been made in the methodology based on age and type of construction.

Element	Description	Current performance		
		Energy Efficiency	Environmental	
Walls	Solid brick, as built, no insulation (assumed)	* ☆ ☆ ☆ ☆	****	
Roof	Pitched, 100 mm loft insulation	★★★☆☆	★ ★ ★ ☆ ☆	
Floor	(other premises below)	—	—	
Windows	Single glazed	★ ☆ ☆ ☆ ☆	★☆☆☆☆	
Main heating	Boiler and radiators, mains gas	★★★★☆	★ ★ ★ ★ ☆	
Main heating controls	Programmer and room thermostat	★★★☆☆	* * * ☆ ☆	
Secondary heating	Room heaters, dual fuel (mineral and wood)	-	_	
Hot water	From main system	★★★★☆	★ ★ ★ ★ ☆	
Lighting	Low energy lighting in 83% of fixed outlets	****	****	
Current energy efficient	ciency rating	D 57		
Current environme		D 55		

Low and zero carbon energy sources

About the cost effective measures to improve this home's performance ratings

If you are a tenant, before undertaking any work you should check the terms of your lease and obtain approval from your landlord if the lease either requires it, or makes no express provision for such work.

Lower cost measures

These measures are relatively inexpensive to install and are worth tackling first. The indicative costs of measures included earlier in this EPC include the costs of professional installation in most cases. Some of the cost effective measures below may be installed as DIY projects which will reduce the cost. DIY is not always straightforward, and sometimes there are health and safety risks, so take advice before carrying out DIY improvements.

1 Loft insulation

Loft insulation laid in the loft space or between roof rafters to a depth of at least 270 mm significantly reduces heat loss through the roof, improving levels of comfort, reducing energy use and lowering fuel bills. The loft space must have adequate ventilation to prevent dampness. Further information about loft insulation and details of local contractors can be obtained from the National Insulation Association (www.nationalinsulationassociation.org.uk).

Higher cost measures

2 New condensing boiler

A condensing boiler is capable of much higher efficiencies than other types of boiler, meaning it will burn less fuel to heat this property. Building Regulations apply to this work.

About the further measures to achieve even higher standards

Further measures that could deliver even higher standards for this home. You should check the conditions in any covenants, planning conditions, warranties or sale contracts before undertaking any of these measures. If you are a tenant, before undertaking any work you should check the terms of your lease and obtain approal from your landlord if the lease either requires it, or makes no express provision for such work.

3 Double glazing

Replacing single-glazed windows with double glazing will improve comfort in the home by reducing draughts and cold spots near windows. Building Regulations apply to this work.

4 Internal or external wall insulation

Solid wall insulation involves adding a layer of insulation to either the inside or the outside surface of the external walls, which reduces heat loss and lowers fuel bills. Further information can be obtained from the National Insulation Association (www.nationalinsulationassociation.org.uk).

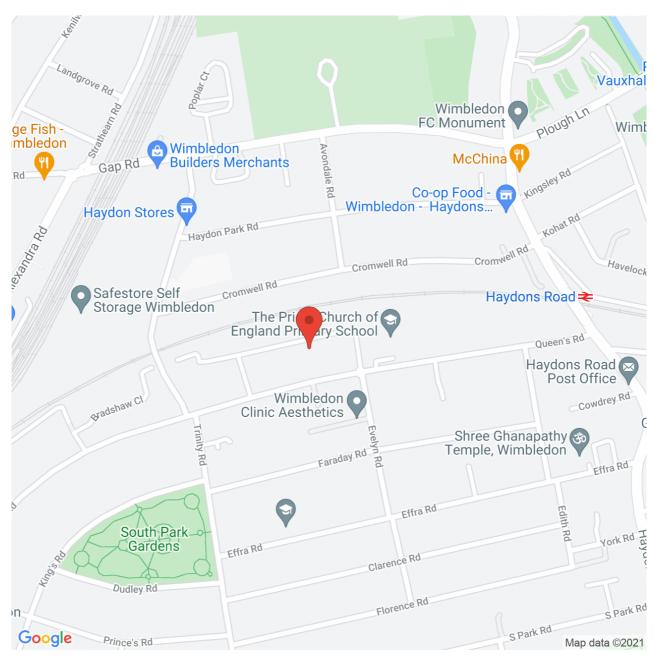

What can I do today?

Actions that will save money and reduce the impact of your home on the environment include:

- Ensure that you understand the dwelling and how its energy systems are intended to work so as to obtain the maximum benefit in terms of reducing energy use and CO₂emissions.
- Check that your heating system thermostat is not set too high (in a home, 21°C in the living room is suggested) and use the timer to ensure you only heat the building when necessary.
- Turn off lights when not needed and do not leave appliances on standby. Remember not to leave chargers (e.g. for mobile phones) turned on when you are not using them.
- Close your curtains at night to reduce heat escaping through the windows.
- If you're not filling up the washing machine, tumble dryer or dishwasher, use the half-load or economy programme.
- Check the draught-proofing of windows and replace it if appropriate.
- If you have unused open chimneys consider blocking them off (making provision for a ventilation opening and a cowl on top of the chimney to avoid dampness).

For advice on how to take action and to find out about offers available to help make your home more energy efficient, call 0800 512 012 or visit www.energysavingtrust.org.uk.
